

Customer Feedback PRO4000X Tablets

PRO4000X is sold in more than ten countries with sales increasing in all markets. The tableted format is very popular in shrimp hatcheries where the simple convenience of throwing tablets into production tanks with no activation is replacing traditional products. It is finding widespread usage on farms as well after clients see similar results.

Country: India **Client:** Mathiyalahan S., Aquabios Enterprises

Usage Rates: Zoea 1-2 tablets daily per 10 MTs of water

Mysis to PL 2-3 tablets daily per 10 MTs of water

Client remarks (from e-mail)

Replaced products from major competitors in trials. Includes INVE, Lallemand and Epicore, and other

Client observations (from e-mail)

- 1. Effective control of yellow and green colonies on TCBS. ^a
- 2. Smooth moulting of larvae.
- 3. Controlling of the Zoeae syndrome. b
- 4. Reduction of Ammonia and Nitrite levels at tanks.
- 5. Better survivals when compared to the other leading Probiotic. ^c

These are unsolicited comments and are similar to what we have heard from others.

Our product, PRO4000X is a very effective tool for use in shrimp and fish hatcheries with proven re-producibility in the field.

^a TCBS is a selective media used for counting vibrios. The bacteria in our tablets compete against bacteria with similar nutrient requirements-including the vibrios. Thus there is a reduction in counts.

^b Zoeae syndrome is a vibrio related problem that causes high levels of mortality. The bacteria in our tablets are effectively inhibiting the bacterial strains that cause this.

^c These are all products available commercially and this testimonial shows that our client found that the tablets replaced the need to use any other products.
